

POLISH POLITICAL SCENE

Country

The role of politics and politicians is to care for the well-being of the country and its values.

Power

Political power should serve citizens.

Development

The goal of politics should be sustainable economic development and improving citizens' quality of life.

INTRODUCTION - WHAT IS POLITICS?

POLITICS - A commonly accepted definition of politics, based on Max Weber's theory, is the pursuit of participation in power or the exercise of influence over the distribution of power.

Politics plays a key role in the functioning of every state. It is not only a struggle for power, but also a tool for shaping social, economic, and legal life.

In the following sections of this report, the Polish political scene, the most important Polish politicians, and their main characteristics will be analyzed in greater detail.

OBJECTIVE OF THE STUDY - The objective of this study is to identify the characteristics of an ideal politician and compare them with politicians who currently play an important role on the Polish political scene. The report aims to identify the politician who is most similar to the hypothetical ideal politician in terms of their characteristics.

The survey questionnaire designed to assess politicians and the current state of Polish politics, together with brief profiles of the politicians being evaluated, is presented at the end of the introduction.

CHARACTERISTICS OF THE POLISH POLITICAL SCENE

The Polish political scene took shape following the fall of communism in 1989, which marked the beginning of the country's political transformation. Since then, Poland has functioned as a democratic state with a multi-party political system and a separation of powers.

SEPARATION OF POWERS IN POLAND:

- EXECUTIVE POWER - THE PRESIDENT AND THE GOVERNMENT
- LEGISLATIVE POWER - THE SEJM AND THE SENATE
- JUDICIAL POWER - INDEPENDENT COURTS AND TRIBUNALS

Contemporary Polish politics is characterized by a high degree of dynamism and clear political polarization. Political parties in Poland continuously face various challenges that affect the social and economic life of the country.

The main political forces can be divided into conservative-national, liberal, centrist, and left-wing groups.

SELECTED POLITICAL PARTIES IN POLAND:

DISTRIBUTION OF POWER IN THE GOVERNMENT

Currently, several of the largest political groups dominate the political scene, although smaller parties and coalition partners also play an important role. Political parties compete primarily for influence in the Sejm and the Senate, as well as for the office of President of the Republic of Poland.

In other words, parties seek to gain legislative power in order to implement policies corresponding to their ideologies.

PUBLIC OPINION POLLS

WHAT ARE THEY?

Public opinion polling is the systematic collection of information about people's opinions, beliefs, and preferences concerning various areas of life, such as politics, the economy, health, or social values.

The purpose of such research is to understand citizens' expectations, feelings, and opinions.

WHAT IS MOST OFTEN STUDIED?

In the political context, researchers most commonly examine support for political parties, trust in political leaders, assessments of the actions of the government and the president, attitudes toward specific laws or reforms, and voting intentions.

WHO CONDUCTS SUCH RESEARCH IN POLAND?

In Poland, public opinion research is most commonly conducted by research institutions such as **CBOS (Public Opinion Research Center)**, a public institution, as well as private organizations such as **IPSOS** and **IBRiS**.

In Poland, such research is conducted particularly frequently before elections. Its purpose is to help parties and candidates understand the needs of voters.

SURVEY QUESTIONNAIRE

The questionnaire was divided into two parts. The first part examined the intensity of particular characteristics for each candidate, while the second part examined the opinions of the respondents. The assessments of the 17 characteristics describing politicians were expressed on a scale from 1 to 100, where 100 represents the highest intensity.

In the second part, opinions concerning 24 statements were classified using a 7-point Likert scale, where: 1 – strongly disagree 7 – strongly agree

I. Proszę o dokonanie oceny w skali od 1 (najniższe nasilenie cechy) do 100 (najwyższe nasilenie cechy) poszczególnych polskich polityków.

POLITICIAN PROFILES

Donald Tusk

- Born on 22 April 1957 in Gdańsk,
- Higher education,
- The longest-serving Prime Minister of the Third Polish Republic.

Donald Tusk studied history. From 2007 to 2014, he served as Prime Minister of the Republic of Poland.

He is a co-founder of PO party. After completing his term as Prime Minister, he became President of the European Council (2014–2019).

From 2021 to 2024, he served as leader of his party, PO, and since 13 December 2023 he has once again served as Prime Minister of Poland.

Jarosław Kaczyński

- Born on 18 June 1949 in Warsaw,
- Higher education,
- As Deputy Prime Minister, he was considered one of the most influential people in Poland.

Jarosław Kaczyński holds a doctoral degree in law. He has served as a member of the Sejm continuously for eight terms.

Since 2003, he has been the leader of the Law and Justice party. From 2006 to 2007, he served as Prime Minister of Poland, while from 2020 to 2022 and again in 2023, he served as Deputy Prime Minister.

Rafał Trzaskowski

- Born on 17 January 1972 in Warsaw,
- Higher education,
- Mayor of Warsaw.

Rafał Trzaskowski holds a doctoral degree in humanities and is a political scientist, academic lecturer, and politician.

Since 2018, he has served as Mayor of the capital city of Warsaw. During his career, he has also served as a Member of the European Parliament and as Minister of Digital Affairs.

He ran in the 2020 and 2025 presidential elections. He is a member of PO/KO party

Karol Nawrocki

- Born on 3 March 1983 in Gdańsk,
- Higher education,
- Current President of Poland.

Karol Nawrocki holds a doctoral degree in humanities and is a historian. Since 2021, he has served as President of the Institute of National Remembrance.

Previously, he headed the Museum of the Second World War (2017–2021). He specializes in contemporary history, particularly the history of social resistance in the People's Republic of Poland.

In 2025, he was elected President of the Republic of Poland, running as a civic candidate.

PROFILE POLITYKÓW

Szymon Hołownia

- Born on 3 September 1976 in Białystok,
- Higher education,
- Speaker of the Sejm of the 10th term.

Szymon Hołownia is a trained journalist and spent many years working in Polish media and entertainment programs.

In 2020, he ran for President of the Republic of Poland. He is the founder of the Poland 2050 party, which is part of the Third Way coalition.

Since 2023, he has served as Speaker of the Sejm. He is known for his social and charitable activities.

Sławomir Mentzen

- Born on 20 April 1986 in Toruń,
- Higher education,
- Economist, entrepreneur, and politician

Sławomir Mentzen holds a doctoral degree in economics and is an entrepreneur. He is also privately interested in history and is one of the leaders of the Confederation party.

In 2023, he became a Member of the Sejm of the 10th term. He is known for his economically liberal views, social media activity, and direct style of communication.

Nevertheless, these characteristics contributed to his relatively strong result in the 2025 presidential election.

Adrian Zandberg

- Born on 4 December 1979 in Aalborg, Denmark,
- Higher education.

Adrian Zandberg holds a doctoral degree in history and is also a programmer. He has previously been involved in social activism.

He is a left-wing politician and the founder of the Together (Razem) party. Since 2019, he has served as a Member of the Sejm. He is known for consistently representing left-wing values, workers' rights, social justice, and the development of public services.

Władysław Kosiniak-Kamysz

- Born on 10 August 1981 in Kraków,
- Higher education,
- Deputy Prime Minister.

Władysław Kosiniak-Kamysz holds a doctoral degree in medical sciences and is a physician. He is an agrarian politician and has served as leader of the Polish People's Party since 2015.

The party is currently part of the KO party. From 2011 to 2015, he served as Minister of Labour and Social Policy. He ran in the 2020 presidential election.

Since 2023, he has served as Deputy Prime Minister and Minister of National Defence.

PRELIMINARY ANALYSIS

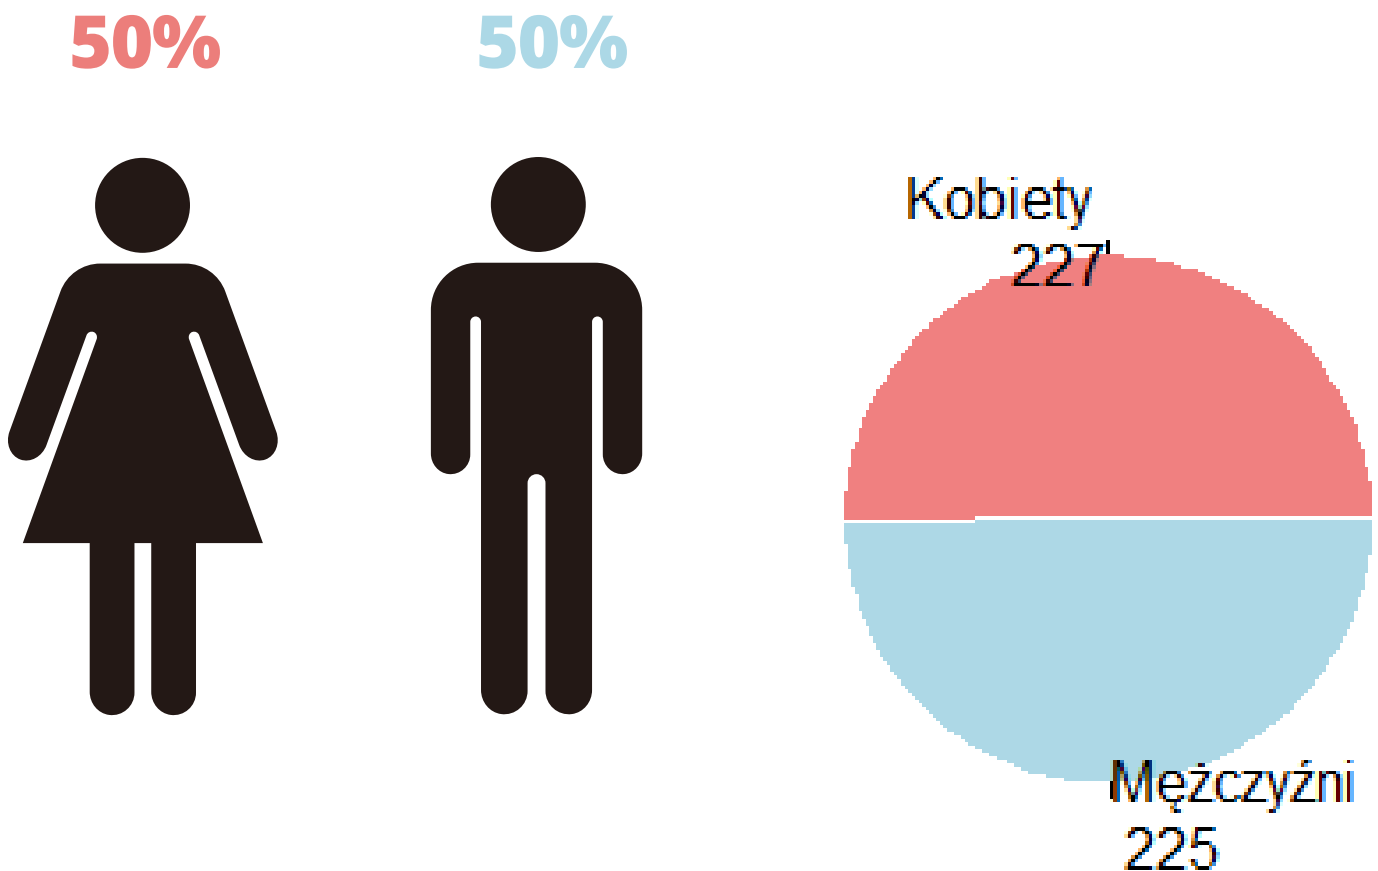

This chapter focuses on a basic analysis of the structure of the respondents who participated in the survey and on the raw results collected for each politician.

First, it is worth examining the gender distribution among the respondents.

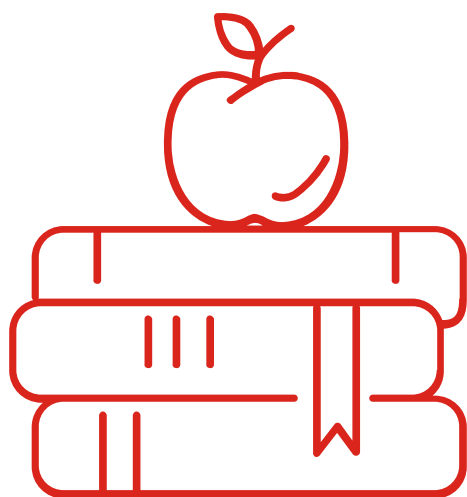

As shown in the pie chart below, women constitute a slight majority. In total, 452 people participated in the study, including 227 women and 225 men.

Interestingly, in percentage terms, this can be expressed as 50% women and 50% men.

Rozkład Płci

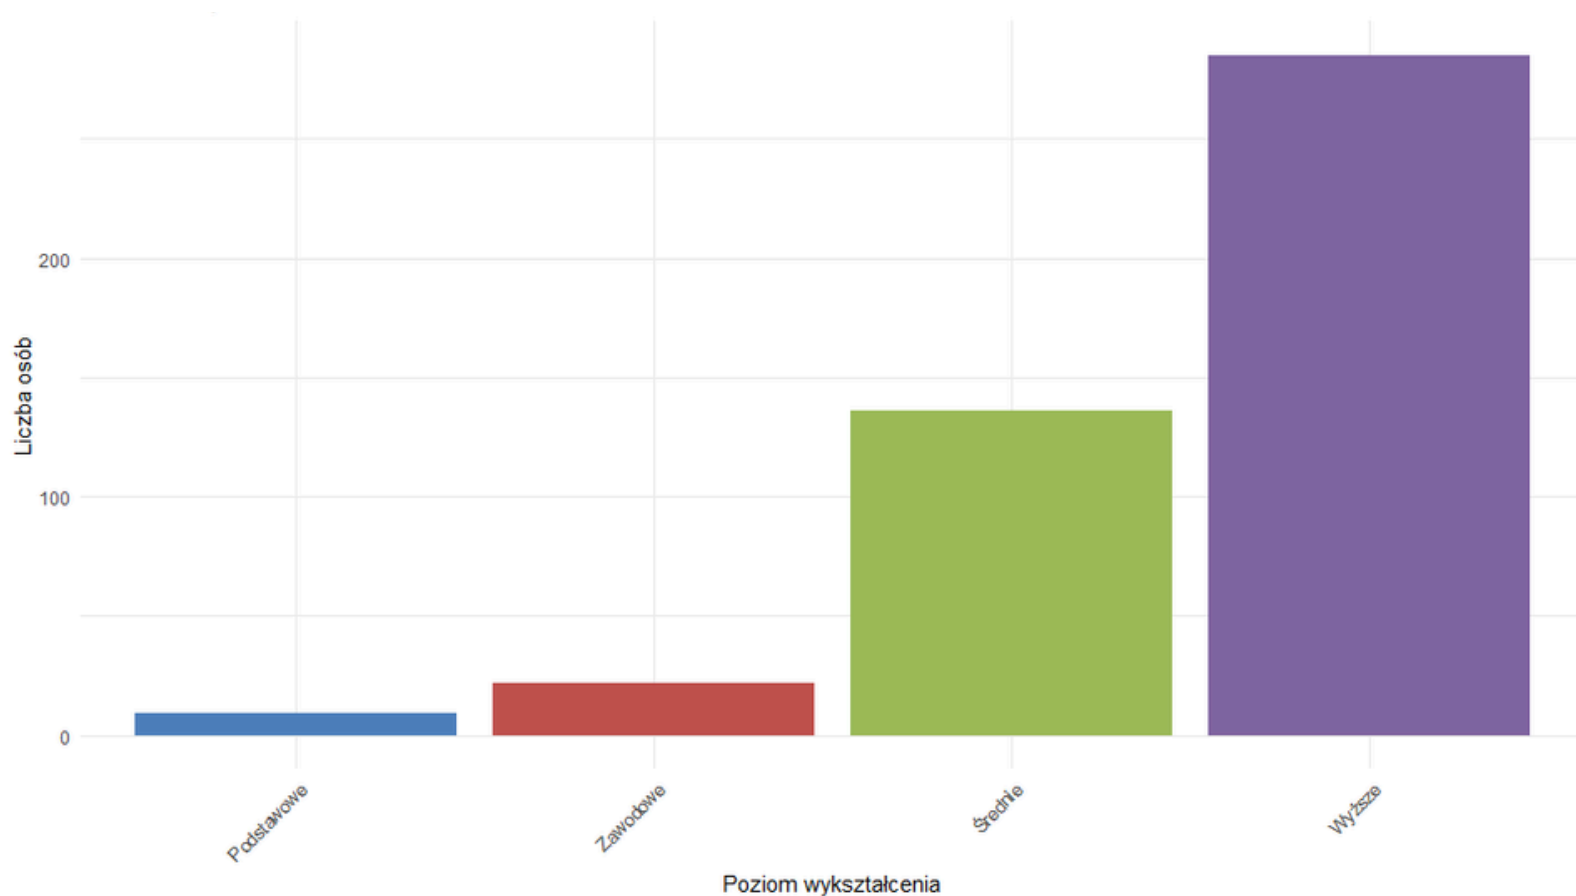

EDUCATIONAL ATTAINMENT DISTRIBUTION

When examining the distribution of educational attainment among respondents, it is clearly visible that the histogram is negatively skewed.

On the left side, there is a characteristic tail consisting of a small number of people with primary and vocational education.

On the right side, larger numbers of respondents with higher education are concentrated.

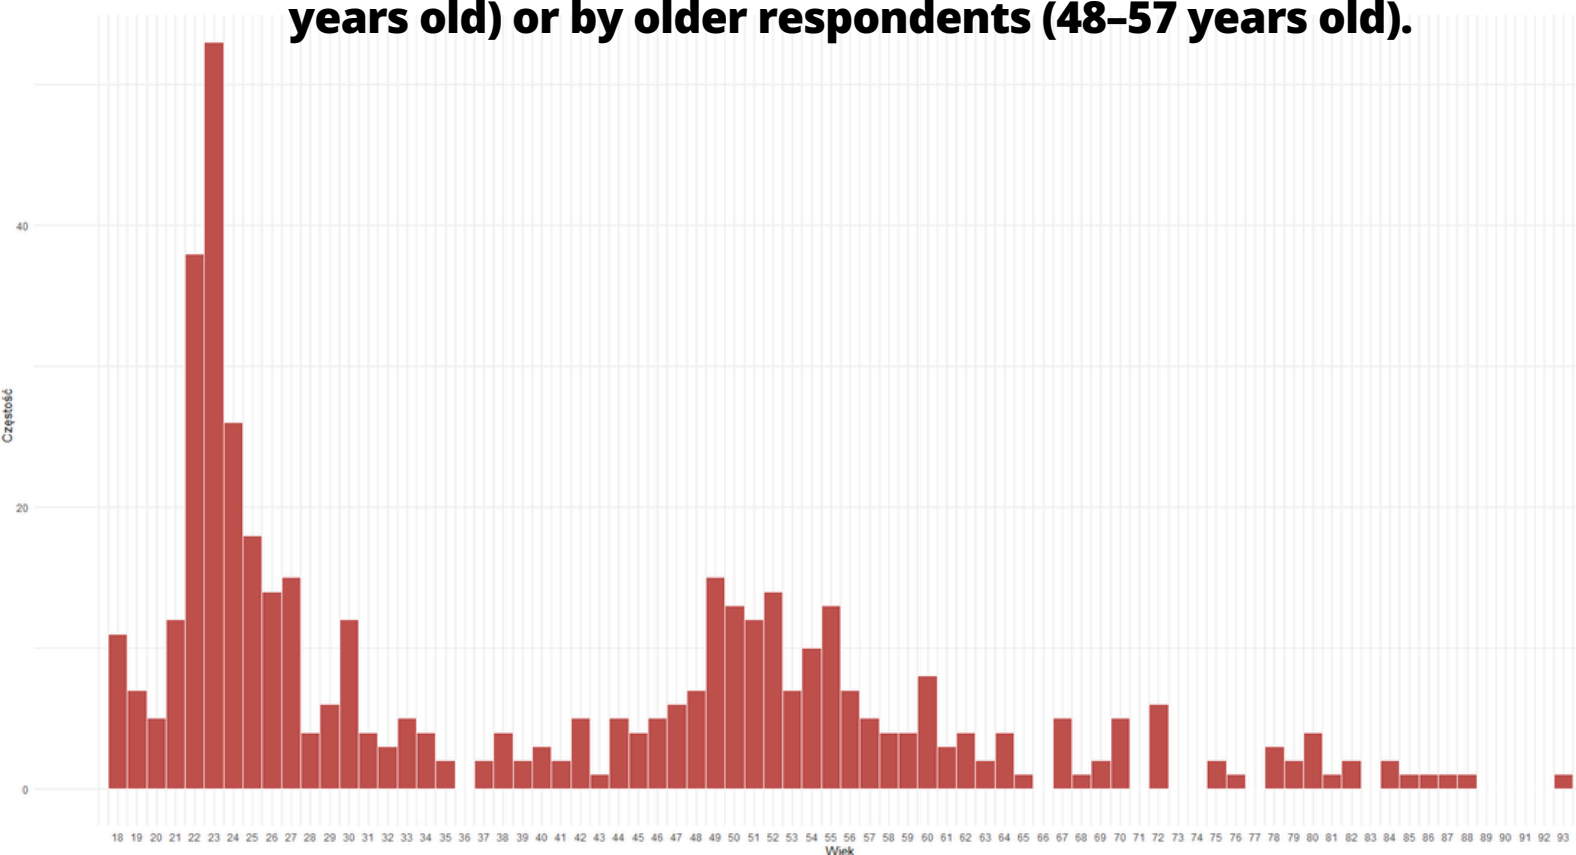

AGE

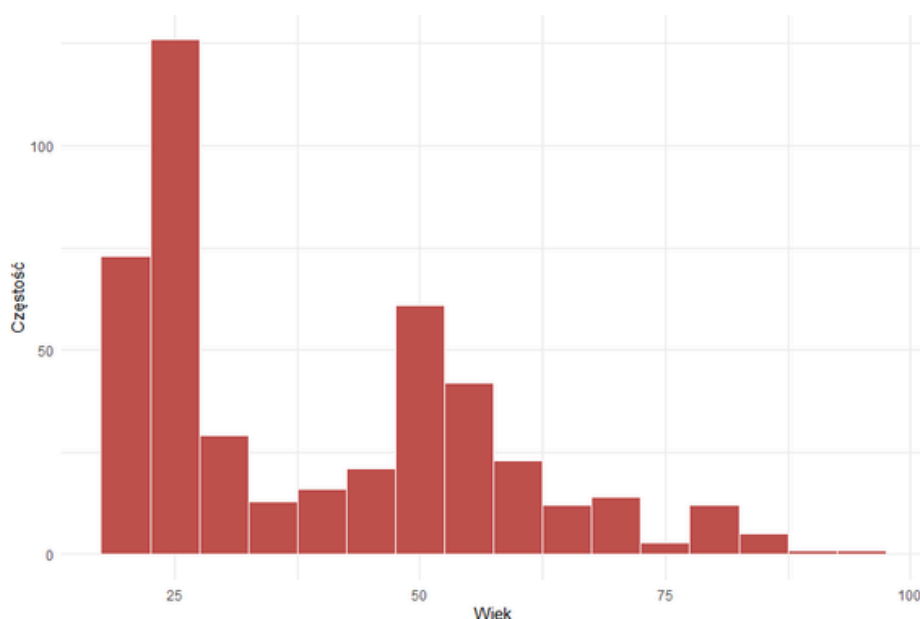

The age distribution is positively skewed. The highest frequency can be observed on the left side of the bar chart, specifically at the value of 23.

This means that the largest number of respondents were 23 years old.

It can also be observed that the questions were answered either by very young respondents (up to 27 years old) or by older respondents (48–57 years old).

For easier visibility and interpretation, a histogram of age is also presented on the right-hand side, this time using five-year age intervals. The conclusions remain the same: young people and young adults clearly predominate.

PRELIMINARY ANALYSIS OF POLITICIANS

MATRIX OF MEAN CHARACTERISTICS

	Donald Tusk	Rafał Trzaskowski	Szymon Hołownia	Sławomir Mentzen	Jarosław Kaczyński	Władysław Kosiniak-Kamysz	Karol Nawrocki	Adrian Zandberg	Polityk Idealny

Tolerancyjny	53,54	64,09	54,59	24,11	19,65	42,01	28,99	59,55	81,60
Dyplomatyczny	59,77	60,68	56,38	33,24	29,21	46,00	34,91	47,06	88,57
Szanowany	47,87	52,67	47,65	35,51	36,19	43,55	34,34	40,68	86,98
Elokwentny	54,09	60,71	58,30	42,55	31,51	45,54	35,47	49,75	87,03
Wpływowy	66,17	53,06	45,44	38,70	56,63	38,65	31,00	36,54	86,11
Atrakcyjny	35,67	60,79	43,87	36,67	18,24	40,11	32,41	39,80	64,82

When analyzing the matrix of the politicians' mean characteristics, it can be observed that Rafał Trzaskowski, Donald Tusk, Szymon Hołownia, and possibly Adrian Zandberg generally receive more favorable assessments.

The largest amount of red, representing the lowest assessments, can be observed for Jarosław Kaczyński, Sławomir Mentzen, and, interestingly, the current President, Karol Nawrocki.

In the following stages of the analysis, the main characteristics describing the individual politicians were examined in greater detail.

The objective of the study is to identify the politician who, according to the respondents, is closest to the ideal politician.

To achieve this, various methods and analytical techniques were used in the following chapters.

STRENGTHS AND WEAKNESSES OF POLITICIANS

	ŚREDNIA OCEN	NAJNIŻSZA ŚREDNIA	CECHA	NAJWYŻSZA ŚREDNIA	CECHA
Donald Tusk	50,50	35,67	Atrakcyjny	66,17	Wpływowy
Rafał Trzaskowski	55,28	44,33	Wiarygodny	66,97	Medialny
Szymon Hołownia	52,08	42,82	Wiarygodny	69,53	Medialny
Sławomir Mentzen	38,46	24,11	Tolerancyjny	53,85	Medialny
Jarosław Kaczyński	33,24	18,24	Atrakcyjny	56,63	Wpływowy
Władysław Kosiniak-Kamysz	42,57	36,65	Innowacyjny	53,73	Kulturalny
Karol Nawrocki	34,57	28,99	Tolerancyjny	42,93	Lojalny
Adrian Zandberg	46,57	36,54	Wpływowy	59,55	Tolerancyjny
Polityk Idealny	85,63	64,82	Atrakcyjny	90,99	Odpowiedzialny

The table above presents the highest- and lowest-rated characteristics for each politician.

When comparing the overall mean scores, Rafał Trzaskowski is the closest to the ideal politician.

However, none of the analyzed politicians stands out in the characteristic that respondents consider most important for an ideal politician: responsibility.

The politician with the lowest overall average assessment, and therefore the one furthest from the ideal politician, is Jarosław Kaczyński.

Interestingly, his highest-rated characteristic is influence.

The following section presents a breakdown of the characteristics and identifies the politician with the highest and lowest score for each characteristic.

Confirming the previous observations, **Rafał Trzaskowski** ranks highest for the majority of characteristics, while **Jarosław Kaczyński** ranks lowest.

At this point, the two politicians are therefore, respectively, the closest and furthest from the ideal politician.

Interestingly, the current President, Karol Nawrocki, has the lowest scores among all analyzed politicians in characteristics such as competence, influence, charisma, and respect.

CECHA	POLITYK Z NAJNIŻSZĄ ŚREDNIĄ OCENĄ CECHY	POLITYK Z NAJWYŻSZĄ ŚREDNIĄ OCENĄ CECHY

IDEAL POLITICIAN

- ✓ **RESPONSIBLE**
- ✓ **HONEST**
- ✓ **COMPETENT**
- ✓ **TRUSTWORTHY**
- ✓ **COMMUNICATIVE**
- ✓ **CONSISTENT**
- ✓ **DIPLOMATIC**

SELECTED CONTINGENCY TABLES

GENDER - DO YOU SUPPORT LGBTQ+?

	TAK	NIE WIEM	NIE
KOBIETA	138	26	63
MEŻCZYŻNA	86	30	109

TEST CHISQ: p-value = 4.437e-06

PHI: 0.2335334

TSCHUPROV: 0.1963774

VCRAMER: 0.2335334

CONTINGENCY COEFFICIENT:
0.2985217

The table presents the relationship between the gender of respondents and their support for LGBTQ+.

The chi-square test indicates that there is a statistically significant relationship (p-value < 0.05).

However, when examining the measures of association strength, the relationship should be considered relatively weak.

Women express support for LGBTQ+ more frequently than men.

AGE - SUPPORT FOR THE EUROPEAN UNION

	NIE	NIE WIEM	TAK
DOROŚLI	25	38	140
MŁODZI	41	36	144
STARSI	8	5	15

TEST CHISQ: p-value = 0.1627

PHI: 0.1202238

TSCHUPROV: 0.0850111

VCRAMER: 0.0850111

CONTINGENCY COEFFICIENT:
0.2785246

The table presents the relationship between respondents' age and support for membership in the European Union.

The age groups were defined as follows: 18-30 years old as young people, 31-70 as adults, and over 70 as older people.

The chi-square test indicates that there is no statistically significant relationship (p-value > 0.05).

This is also confirmed by the measures of association strength.

Regardless of age group, the majority of respondents describe themselves as pro-European.

MARGINAL DISTRIBUTION TABLE:

	NIE	NIE WIEM	TAK	SUM
DOROŚLI	25	38	140	203
MŁODZI	41	36	144	221
STARSI	8	5	15	28
SUM	74	79	299	452

TABLE EXPRESSED AS PROPORTIONS:

	NIE	NIE WIEM	TAK	SUM
DOROŚLI	5,53	8,41	30,97	44,91
MŁODZI	9,07	7,96	31,86	48,89
STARSI	1,77	1,11	3,32	6,19
SUM	16,37	17,48	66,15	100

EXPECTED DISTRIBUTION:

	NIE	NIE WIEM	TAK
DOROŚLI	33,23	35,48	134,29
MŁODZI	36,18	38,63	146,19
STARSI	4,58	4,89	18,52

SINCE AGE AND SUPPORT FOR THE EUROPEAN UNION ARE INDEPENDENT, THIS CAN BE DEMONSTRATED USING THE EXPECTED DISTRIBUTION.

To demonstrate this, the observed frequencies should be compared with the products of the corresponding marginal distributions divided by n .

Here, $n = 452$, because this is the number of people who participated in the survey.

For example, adults account for 44.91% of all respondents.

If age has no influence on political views, the proportion in each column of the expected values should be identical to the empirical values.

We begin by creating the expected distribution presented above. The next step is to create a table of expected proportions containing the marginal distributions. As can be seen in the comparison below, the marginal distributions are identical, demonstrating the absence of a relationship between the variables.

	NIE	NIE WIEM	TAK	SUM
DOROŚLI	25	38	140	203
MŁODZI	41	36	144	221
STARSI	8	5	15	28

STARSI	4,58	4,89	18,52	28
SUM	74	79	299	452

THEORETICAL VALUES

RELIABILITY ANALYSIS

A reliable question is one that accurately measures what it is intended to measure.

Reliability analysis aims to assess the degree of relationship between questions in a questionnaire, the overall repeatability and stability of results, the internal consistency of the instrument, and to identify potentially problematic questions.

STATEMENTS AND THEIR RATINGS ON THE LIKERT SCALE

Przy czym:

CORRELATION MATRIX OF QUESTIONS USING THE LIKERT SCALE

For the reliability analysis to produce satisfactory results, the first step is to exclude questions that do not correlate with one another. The remaining questions will then be divided into two groups in order to conduct a split-half reliability analysis.

Split-half analysis is a method for assessing test reliability. Respondents usually complete one questionnaire, and the analyst subsequently divides the questions artificially into two parts. The analyst then examines measures such as internal consistency. These analyses are used to determine how consistent the results obtained from the two parts are. A high correlation between the results of the two groups suggests that the test is reliable.

DIVISION INTO SUBSETS

The division was performed artificially: even-numbered questions were assigned to subset 2, while odd-numbered questions were assigned to subset 1. Other division structures resulted in very low Cronbach's alpha coefficients.

SET 1

- 1) Polscy politycy dotrzymują obietnic wyborczych.
- 3) Polscy politycy myślą od wyborów do wyborów
- 5) Polscy politycy dbają o interesy obywateli bardziej niż o własne korzyści.
- 7) Polscy politycy skutecznie dbają o bezpieczeństwo energetyczne kraju.
- 9) Polscy politycy są poważani na arenie międzynarodowej.
- 11) Wojsko jest odpowiednio zarządzane przez polskich polityków.
- 13) Działania polskich polityków coraz bardziej dzielą społeczeństwo.
- 15) W Polsce młodzi ludzie mają realny wpływ na politykę.
- 17) Polacy są tolerancyjni wobec innych narodowości.
- 19) Państwo powinno wspierać tradycyjny model rodziny (mężczyzna i kobieta).
- 21) Osoby LGBTQ+ powinny mieć prawo zawierania małżeństw w Polsce.
- 23) Władimir Putin stanowi zagrożenie dla bezpieczeństwa Polski i Europy.

Statistics

mean: 49.17

sum: 22373

std deviation: 7.06

var: 49.87

alpha Cronbach: 0.64

SET 2

- 2) Polscy politycy nadużywają władzy.
- 4) Polscy politycy potrafią ze sobą współpracować.
- 6) Polscy politycy podejmują działania na rzecz klimatu i ochrony środowiska.
- 8) Polscy politycy respektują prawo unijne i międzynarodowe.
- 10) Polscy politycy skutecznie reprezentują interesy geopolityczne Polski.
- 12) Służba zdrowia jest wspierana przez polskich polityków.
- 14) Uczestnictwo w wyborach pełnoletniego obywatela powinno być obowiązkowe.
- 16) Kobiety mają mniejsze szanse w polskiej polityce niż mężczyźni.
- 18) Polacy cechują się wysoką świadomością polityczną.
- 20) Kobiety powinny mieć pełną swobodę decydowania o swoim ciele bez ingerencji państwa.
- 22) Członkostwo Polski w Unii Europejskiej przynosi więcej korzyści niż strat.
- 24) Polacy często opierają swoją wiedzę o polityce z tabloidowych źródeł (sensacyjnych, uproszczonych).

Statistics

mean: 50.64

sum: 23044

std deviation: 7.43

var: 55.15

alpha Cronbach: 0.66

The Cronbach's alpha values for both sets can be considered questionable.

However, among the available questions and possible divisions, these were the highest values that could be achieved.

THE CORRELATION BETWEEN THE TWO HALVES, BETWEEN SETS 1 AND 2, IS:

0.5259359

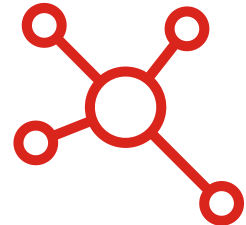

MODERATE AGREEMENT BETWEEN THE RESULTS FROM THE FIRST HALF AND THE RESULTS FROM THE SECOND HALF.

SPEARMAN-BROWN CORRELATION

0.689329

Estimated reliability of the entire test.
The coefficient indicates moderate reliability
- the questionnaire is reasonably reliable,
but not perfect.

GUTTMAN SPLIT-HALF RELIABILITY

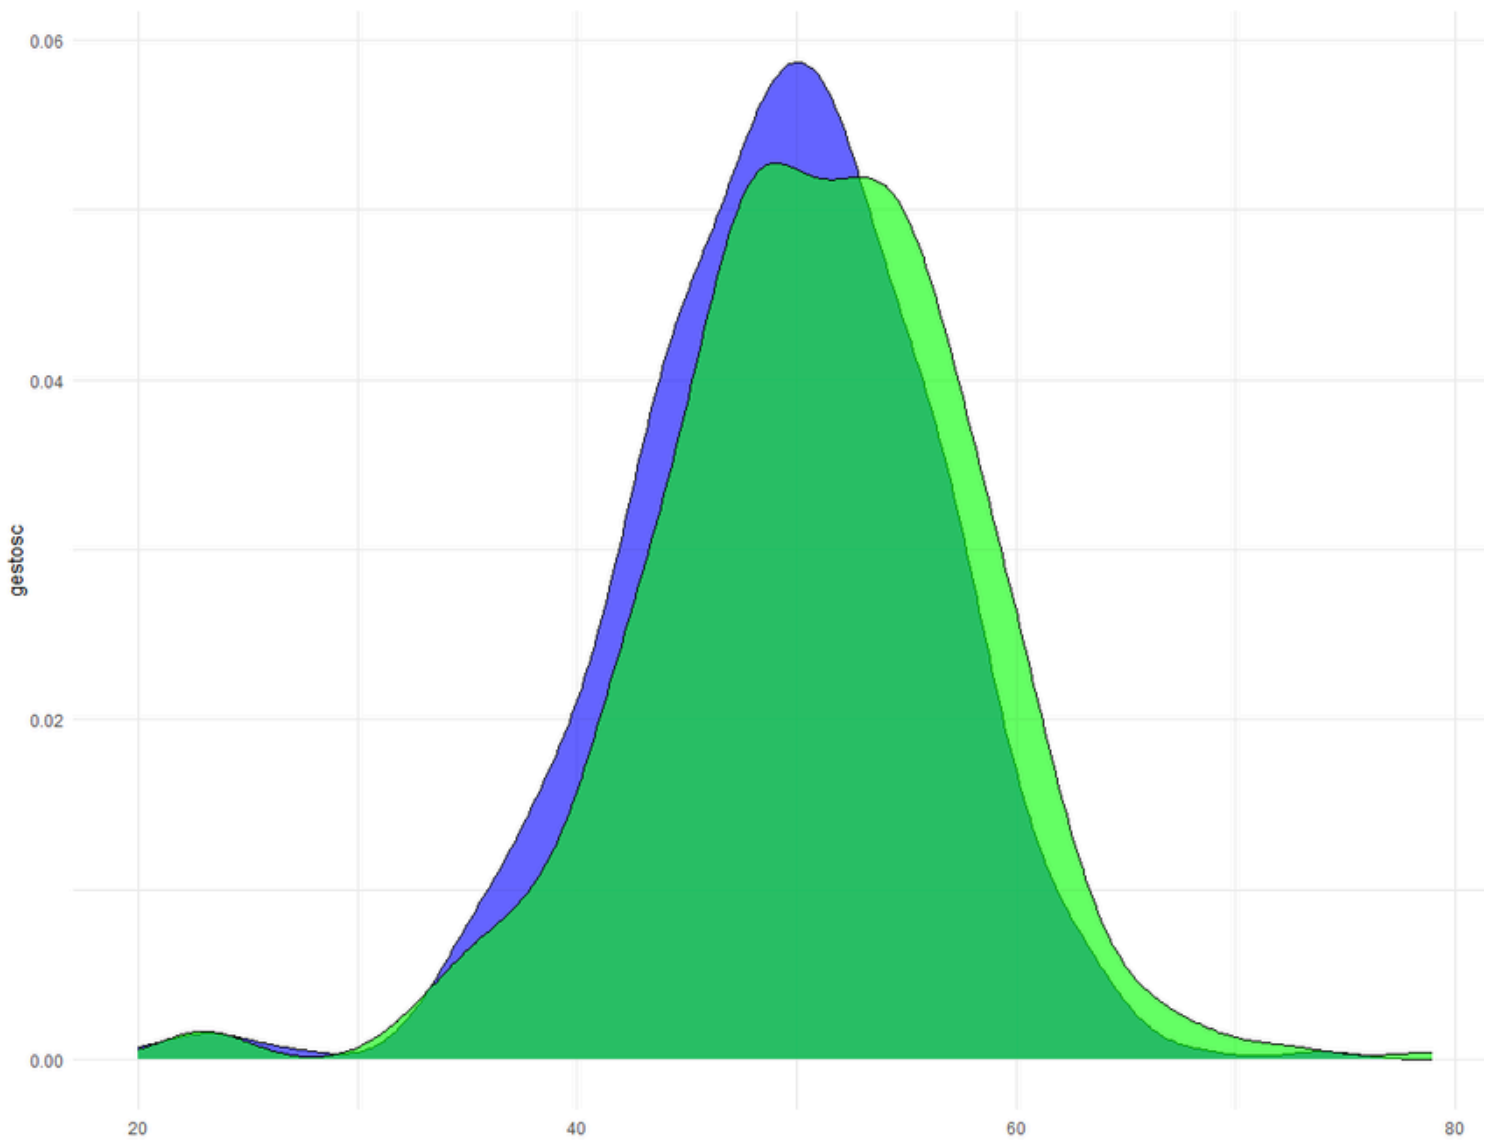

0.6887582

The questionnaire is relatively internally consistent.
Some questions may require further refinement or removal if they demonstrate low correlations with the remaining items.

It can therefore be concluded that the results demonstrate moderate reliability. Respondents answered the first and second parts in a relatively similar manner. The instrument is not perfectly consistent, but it provides a certain level of reliability. The moderate correlation suggests that the questionnaire measured more than one construct.

DENSITY PLOT OF THE RESULTS FROM BOTH HALVES OF THE TEST

SET/HALF 1

SET/HALF 2

CLUSTER ANALYSIS

Cluster analysis is one of the statistical methods used to classify objects based on the similarity of their characteristics. **Its purpose is to group the analyzed units - in this case, politicians - so that objects belonging to the same cluster are as similar to one another as possible, while simultaneously differing from objects in other clusters.**

In practice, cluster analysis is used in psychology, social research, marketing, and other fields.

As part of the cluster analysis, new datasets were prepared.

One dataset was binary, while the other was mixed and contained both qualitative and quantitative characteristics.

The analyzed units were the same politicians as in the original questionnaire (8 politicians + an abstract ideal politician).

NEW DATASETS

	TUSK	TRZASKOWSKI	HOŁOWNIA	MENTZEN	KACZYŃSKI	KOSINIAK	NAWROCKI	ZANDBERG	IDEALNY

IDEALNY	0,250	0,125	0,500	0,375	0,375	0,250	0,500	0,250	0,000

We begin the cluster analysis by presenting the Jaccard distance matrix, which shows the distances between each politician and between each politician and the ideal politician. The closer the value is to 0, the closer the politician is to the ideal politician. According to the new binary dataset, Rafał Trzaskowski is the closest to the ideal politician, while Szymon Hołownia and Karol Nawrocki are tied as the furthest from the ideal politician.

	x1	x2	x3	x4	x5	x6	x7	x8	SUMA
TUSK	1	1	1	0	1	1	1	0	6
TRZASKOWSKI	1	1	1	1	1	1	0	1	7
HOŁOWNIA	1	1	1	0	0	0	0	1	4
MENTZEN	1	0	1	1	1	0	0	1	5
KACZYŃSKI	1	0	0	1	1	1	1	0	5
KOSINIAK-KAMYSZ	1	1	1	1	1	1	0	0	6

IDEALNY	1	1	1	1	1	1	1	1	8

PRESENCE MATRIX

CO-PRESENCE MATRIX

	x1	x2	x3	x4	x5	x6	x7	x8
x1	9	6	8	6	7	6	3	6
x2	6	6	6	4	5	4	2	4
x3	8	6	8	5	6	5	2	6
x4	6	4	5	6	6	4	2	4
x5	7	5	6	6	7	5	3	4
x6	6	4	5	4	5	6	3	3
x7	3	2	2	2	3	3	3	1
x8	6	4	6	4	4	3	1	6

When comparing the candidate profiles using the presence matrix, Rafał Trzaskowski is once again found to be the most similar to the ideal politician. Analyzing the co-presence matrix, it can be observed that the simultaneous occurrence of characteristics X7 and X8 appears only for the ideal politician. Interestingly, these characteristics correspond to being over 55 years old and participating in the 2025 election.

JACCARD SIMILARITY MATRIX

Comparing the Sokal-Michener and Jaccard similarity matrices leads to similar conclusions. Once again, **Rafał Trzaskowski** is the most similar to the ideal politician. Interestingly, according to the Sokal-Michener measure, Rafał Trzaskowski is equally similar to the ideal politician, Adrian Zandberg, and Władysław Kosiniak-Kamysz. In both cases, Karol Nawrocki and Szymon Hołownia are the furthest from the ideal politician.

DENDROGRAM

GRUPA 1	GRUPA 2	GRUPA 3
TUSK	HOŁOWNIA	KACZYŃSKI
TRZASKOWSKI	NAWROCKI	
MENTZEN		
KOSINIAK-KAMYSZ		
ZANDBERG		
IDEALNY		

On the left, the clusters formed by the politicians based on Jaccard distance and the Average method are presented. A relatively large cluster formed around the ideal politician, while Jarosław Kaczyński formed a separate individual cluster.

The second new dataset contains both quantitative and qualitative variables, so different distance measures must be applied. Below, the Gower distance matrix and the generalized distance matrix are presented. As before, a smaller distance from the ideal politician indicates greater similarity. Once again, **Rafał Trzaskowski** is the closest to the ideal politician. In contrast, **Jarosław Kaczyński** differs the most from the ideal politician.

DENDROGRAM

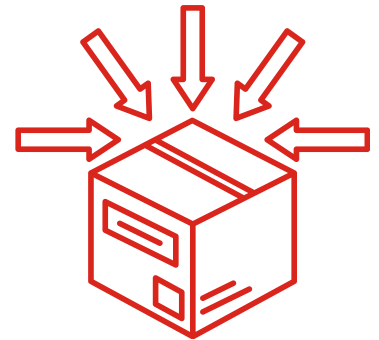

ONLY TWO GROUPS

FACTOR ANALYSIS

Factor analysis is one of the key techniques of multivariate statistics. Its purpose is to reduce the number of original variables and identify their underlying common structure.

This tool is particularly useful when dealing with a large number of measurable variables, whether continuous or ordinal, that may be interrelated.

OBJECTIVE OF FACTOR ANALYSIS

The objective is to replace correlated original variables with a smaller number of uncorrelated factors. The new variables, or factors, should explain as much of the variation in the original data as possible while preserving its correlation structure. In this study, we will search for a latent political variable - an unobserved variable that is not measured directly but influences the variables being analyzed.

CONDITIONS FOR FACTOR ANALYSIS AND PRELIMINARY TESTS

Before conducting the actual analysis, it is necessary to assess whether the variables form an appropriate correlation structure:

- Test KMO (Kaiser-Meyer-Olkin): assesses whether the correlations between variables are sufficiently strong to apply factor analysis. A desirable KMO value is at least 0.7.
- Measure of Sampling Adequacy (MSA): calculated separately for each variable. Variables with $MSA < 0.6$ should be considered for removal.
- Bartlett's test of sphericity: tests the statistical significance of the correlation matrix. The null hypothesis assumes that all correlation coefficients are equal to zero.

THE STARTING POINT WILL BE THE SPEARMAN CORRELATION MATRIX OF THE STATEMENTS ASSESSED USING THE LIKERT SCALE.

Cronbach's alpha indicates that the data are moderately consistent, meaning that factors may exist, although at this stage it is not yet known what they are. The characteristics demonstrate a moderate degree of association. In Bartlett's test, the null hypothesis was rejected, which means that the correlation matrix contains relationships between the characteristics. The KMO coefficient indicates that the relationships are sufficiently strong to conduct factor analysis. The MSA values for each variable are above 0.6, so there is no need to remove any of the variables.

Returning to the correlation matrix, its interpretation is relatively straightforward. Negative values are marked in red, with the intensity increasing as the value becomes smaller. Positive correlation values are marked in green, with the intensity increasing as the correlation coefficient becomes larger.

SELECTED CORRELATIONS BETWEEN VARIABLES (STATEMENTS)

The highest correlation coefficient is observed between the statements: "Poles demonstrate a high level of political awareness" and "LGBTQ+ people should have the right to marry in Poland." The correlation coefficient is 0.54, which represents a moderate correlation on the general scale. However, within the analyzed dataset, this is the highest value and indicates liberal/left-wing views among the respondents.

The second-highest correlation coefficient is observed between the statements: "Polish politicians are respected internationally" and "Polish politicians effectively take care of the country's energy security." The correlation coefficient is 0.52, which represents a moderate correlation on the general scale. However, within the analyzed dataset, this is a relatively high value. It may indicate that respondents believe that politicians who take care of energy security are consequently respected internationally.

The lowest correlation coefficient is observed between the statements: "Poles are tolerant toward other nationalities" and "LGBTQ+ people should have the right to marry in Poland." The correlation coefficient is -0.54, which represents a moderate negative correlation. This suggests a tendency to divide respondents into those with conservative views and those with more equality-oriented views.

CORRELATION MATRIX - GROUPING

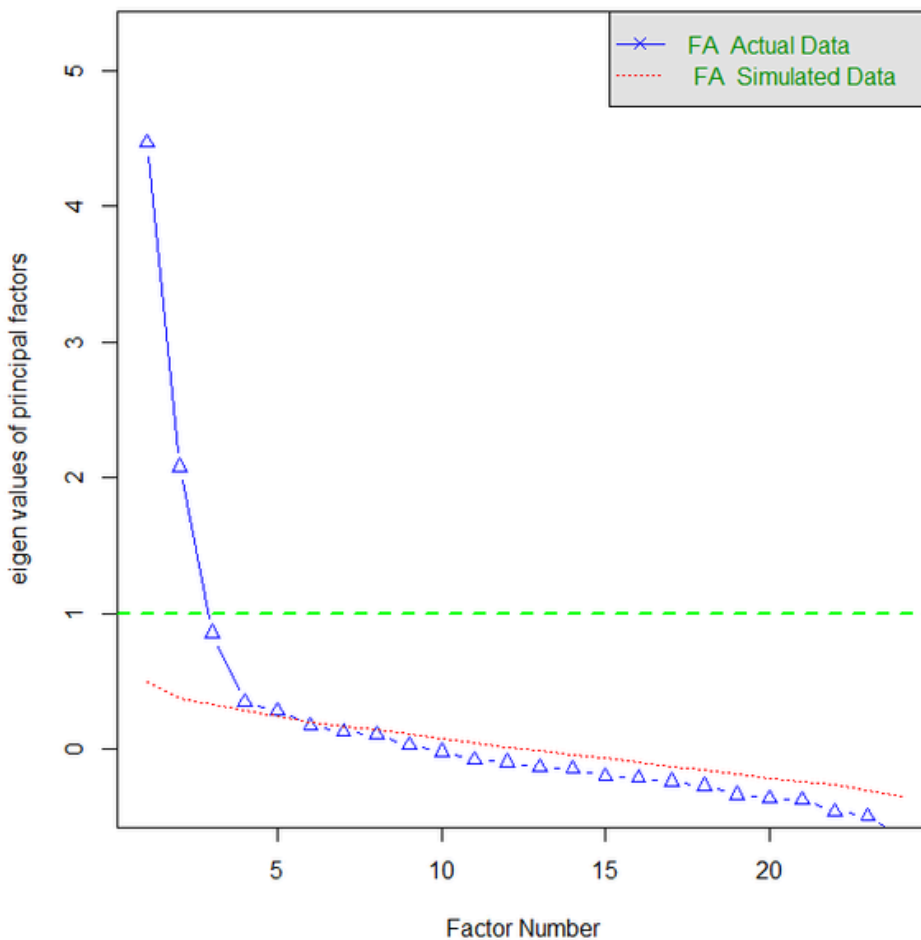

FACTOR EXTRACTION

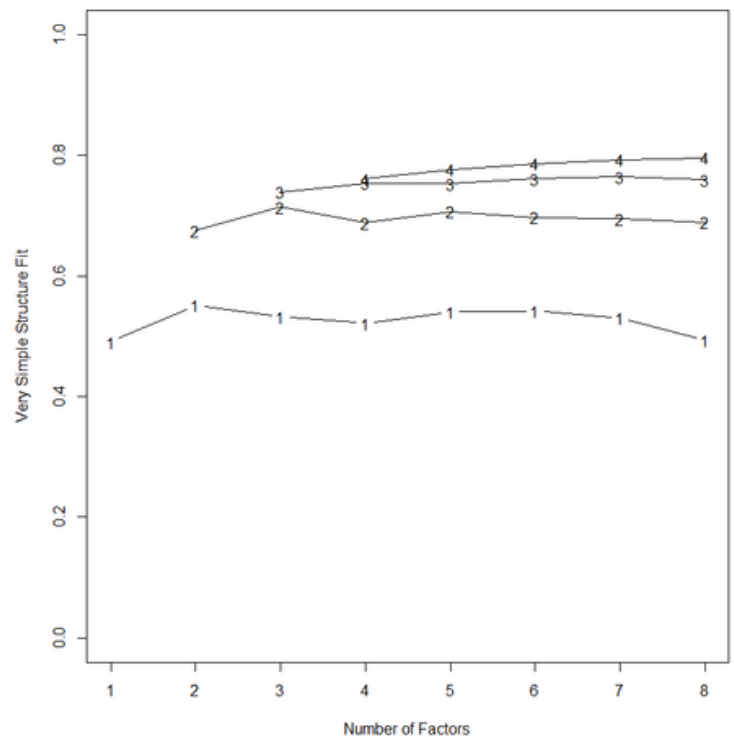

There are many methods for estimating factor loadings. For the purposes of this analysis, three of them will be presented:

- **Principal Axis Factoring** does not require the assumption of multivariate normality and seeks to maximize the relationships between the factors and the analyzed items.
- **Maximum Likelihood** requires the individual questionnaire items to follow a normal distribution and is used to determine the statistical significance of the difference between the empirical and theoretical structures.
- **Principal Component Analysis** is the most basic method and aims to obtain the highest possible proportion of explained variance of the original variables.

SCREE PLOT

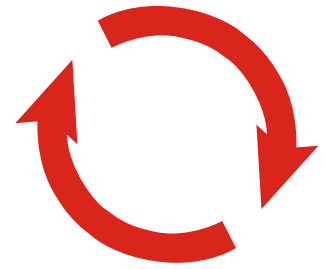

In the scree plot above, it can be clearly seen that only two points remain above the green line representing Cattell's criterion. This indicates that the subsequent analysis will be conducted with the assumption that we are looking for two latent variables. If another criterion were applied, for example one allowing factors with eigenvalues greater than 0.7 rather than Cattell's criterion of greater than 1, three factors would be included in the subsequent analysis. This could result in a larger proportion of the variance being explained.

ROTATIONS

After determining the number of factors, the elements comprising these factors are analyzed. For this purpose, rotations are used - methods that involve rotating and adjusting the axes representing the factors in order to facilitate their interpretation. Orthogonal and oblique rotations can be distinguished.

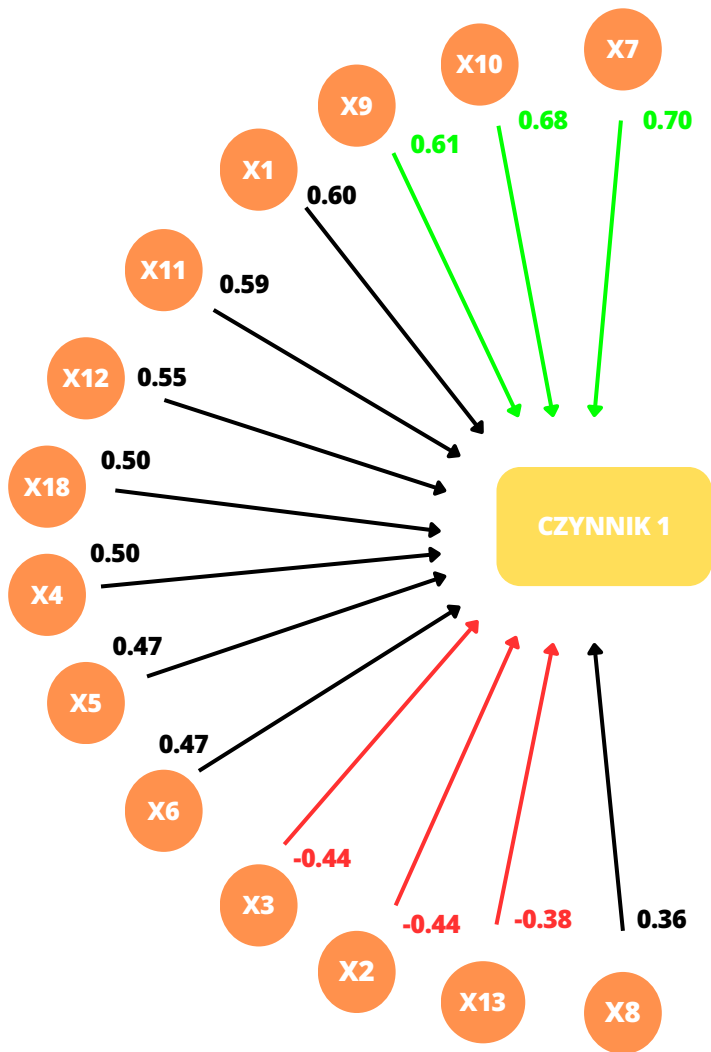

Orthogonal rotations aim to minimize correlations between factors, which makes interpretation easier. Several methods exist; however, only the following one was applied in this study:

Varimax - The Varimax method minimizes the distances between factors, creating factors with a smaller number of components, which is recommended and commonly used.

RESULTS OF THE FACTOR ANALYSIS

When comparing the two factor-analysis methods, it turns out that factor analysis with Varimax rotation is more effective. It identifies the factors more precisely, and a larger number of the variables forming them exceed a loading value of 0.6. Interestingly, as many as two variables have a Hoffman index of 2.0, which indicates that these variables influence Factors 1 and 2 to the same degree. Variables 14 and 15 do not form any latent variable. They could have been removed at an earlier stage of the analysis or retained as a separate set, as shown in the Spearman correlation matrix.

KEY VARIABLES:

X7 - Politicians effectively take care of the country's energy security.

X10 - Politicians effectively represent Poland's geopolitical interests.

X9 - Polish politicians are respected internationally.

FACTOR 1 - Security and national interests

KEY VARIABLES:

X21 - LGBTQ+ people should have the right to marry in Poland.

X20 - Women should have full freedom to make decisions about their bodies without state interference.

FACTOR 2 - Tolerance and equality

CORRESPONDENCE ANALYSIS

Correspondence analysis is an exploratory statistical method used to examine the co-occurrence of categories of nominal variables. Its main purpose is to provide a graphical representation of relationships and associations between categories of two or more qualitative variables. This makes it easier to interpret the data and identify underlying structures. The technique allows nominal data to be presented using one-, two-, or three-dimensional plots, which are used to visualize relationships between the categories of the variables being analyzed.

Correspondence analysis has strong theoretical foundations derived from research on the chi-square statistic. At the beginning of the 20th century, Pearson and Fisher conducted research on model fitting and the independence of variables in frequency tables. Pearson also introduced the mean-square contingency measure as a way of assessing the strength of relationships between qualitative variables. Further important developments in correspondence analysis took place in the 1930s and 1940s, particularly through the work of Hirschfeld, Fisher, and Guttman, although at that time the focus was primarily numerical rather than graphical.

The modern form of correspondence analysis, which emphasizes the geometric representation of data, was proposed in the 1960s by Jean-Paul Benzécri. His work initiated the development of the method as a tool for visualizing relationships between categories of qualitative variables. In the 1970s and 1980s, the method became increasingly popular due to its dissemination in the English language, including through the publications of Michael Greenacre.

EXPLANATION OF TERMS

MASS - refers to the weight or importance assigned to individual rows and columns of a contingency table. Masses reflect the proportional contribution of each row and column to the total number of observations, helping to understand their relative importance in the analysis.

INERTIA - a measure of the total variance in the data that describes the distribution of points in multidimensional space. It is used to assess the quality of representing the data using a specific number of dimensions. Higher inertia values indicate that a given dimension explains a larger proportion of the total variance.

TOTAL INERTIA - a measure of the dispersion of points in multidimensional space, referring to the total variance of the data.

QUALITY - refers to the extent to which individual data points are well represented in factor space. In other words, quality indicates how accurately the points shown on the plot reflect their actual positions in the original multidimensional space.

The matrix presents the proportions of ratings assigned to characteristics of politicians in the context of different characteristics. In other words, it provides information about the frequency with which each characteristic was assigned to individual politicians in the analyzed sample. Based on this distribution, mean profiles for rows and columns can be created and compared to determine whether a particular characteristic is important for a given politician.

The matrix above shows which characteristics are important for individual politicians.

VISUALIZATION OF POLITICIAN PROFILES ON THE PLOT

The highest curve, and therefore the curve with the highest average characteristic ratings, represents the profile of the ideal politician. The next curve below it belongs to Rafał Trzaskowski, who, according to the study, is the politician most similar to the ideal politician. At the bottom are the politicians who differ the most from the ideal politician: Karol Nawrocki and Jarosław Kaczyński, respectively.

The politicians most strongly correlated with the first dimension are Jarosław Kaczyński, Sławomir Mentzen, and the ideal politician. The second dimension is most strongly correlated with Adrian Zandberg, Władysław Kosiniak-Kamysz, Karol Nawrocki, and the ideal politician. The two-dimensional plot below clearly shows that, based on the correspondence analysis, Władysław Kosiniak-Kamysz is the politician closest to the ideal politician due to characteristics such as responsibility and innovativeness. Adrian Zandberg is also located nearby and is assessed as innovative and tolerant. Jarosław Kaczyński is positioned alone on the left side of the plot, which confirms his generally low scores for the characteristics. However, the characteristic influential is also located close to him. This suggests that he is perceived as the most influential politician. Karol Nawrocki is located in the center of the plot, which may indicate a balanced or not yet clearly defined image due to his relatively short political career. Donald Tusk is not closely associated with any particular characteristic; the characteristic closest to his position is media presence. Szymon Hołownia and Rafał Trzaskowski are assessed as eloquent, attractive, diplomatic, and communicative. Sławomir Mentzen is most commonly perceived as charismatic.

SUMMARY

STRUCTURE OF RESPONDENTS - According to gender, education, and age.

Respondents were divided approximately equally by gender. In terms of age, the study was dominated by young people. Regarding education, people with lower levels of education constituted a minority, while respondents with higher education clearly predominated. The largest group, accounting for 17.5% of respondents, consisted of young men with higher education.

WHAT DO POLES AGREE AND DISAGREE WITH?

- ✓ 87% of respondents agree with the statement: "Vladimir Putin poses a threat to the security of Poland and Europe."
- ✓ 82% of respondents agree with the statement: "Polish politicians abuse their power."
- ✓ 81% of respondents agree with the statement: "The actions of Polish politicians are increasingly dividing society."

- ✗ 72% of respondents disagree with the statement: "Polish politicians keep their electoral promises."
- ✗ 71% of respondents disagree with the statement: "Polish politicians care more about the interests of citizens than their own benefits."
- ✗ 70% of respondents disagree with the statement: "Polish politicians are capable of cooperating with one another."

ACCORDING TO THE RESPONDENTS, THE MOST IMPORTANT CHARACTERISTICS OF AN IDEAL POLITICIAN ARE:

RESPONSIBLE **CONSISTENT** **COMMUNICATIVE**

HONEST **TRUSTWORTHY**

COMPETENT **DIPLOMATIC**
